

BUILDING A BETTER FIRM: SELECTING THE RIGHT TECHNOLOGY

EXISTING OR NEW TECHNOLOGY?

- Reassess priorities before upgrading tools.
- Use AI-powered financial analysis, data analytics, and automation to enhance advisory and audit services.
- Experiment—new tools may clarify your real goals.
- Key takeaway: Don't justify technology—justify its business value.

MAKE TRAINING A PRIORITY

- Transformation is incremental; learning is ongoing.
- Avoid the “digital native” myth—proper training is non-negotiable.
- Include tech goals in performance reviews and give time for exploration.

NURTURE IN-HOUSE RESOURCES

- **Your team already uses tech—leverage that knowledge.**
- **Form a “tech champion” group to identify what works and where gaps exist.**
- **Involve staff in choosing tools—they often know the practical fit better than IT.**

BALANCE EFFICIENCY AND INNOVATION

- **Efficiency optimizes today; innovation safeguards tomorrow.**
- **Encourage experimentation—even if it fails, it fuels growth.**
- **Sustainable firms balance cost-saving automation with creative problem-solving.**
